Overview of the Practicum Engagement

Company Background

Figure 1. Kooapps Logo

The student interned at Kooapps Philippines Corporation, an indie mobile game development studio and publisher, and the Philippine development office of Kooapps, a company founded in the United States. Located in Makati City, Philippines, Kooapps Philippines Corporation contributes to the development, quality assurance, creative production, and maintenance of games and applications published by Kooapps. Kooapps was established in 2008, with its headquarters located at 12400 SE 38th St., Bellevue, Washington. The company was founded by Chun-Kai "CK" Wang, Jonathan Chang, Stephanie Cheng, and Solon Chen. In 2009, Solon Chen co-founded Kooapps Philippines Corporation and established its Philippine operations, which serve as the company's center for engineering, quality assurance, and creative production.

Kooapps combines the experience and vision of its founders with the creativity and technical expertise of Filipino game developers, fostering a collaborative work environment focused on innovation, craftsmanship, and continuous learning. The company invests in the professional development of its employees and interns by providing real-world exposure to the mobile game development and quality assurance pipeline. Interns are given opportunities to contribute to meaningful projects, strengthen their technical and professional skills, and gain experience in a fast-paced, product-driven studio environment. Guided by its philosophy, "We make games we want to show our friends," Kooapps continues to develop engaging mobile games while pursuing its vision of becoming the first global Filipino gaming brand.

Training Description	

My first week was orientation, where I got introduced to the company, my team, and the internal tools and QA processes I'd be using going forward. From there I moved into training, where I picked up the technical grounding needed to test app builds accurately and consistently. Testing made up the bulk of my internship at 238 hours, covering scheduled and priority testing across the company's titles, ad verification, bug fix confirmation, and Google Play Pass compliance checks. The remaining 200 hours went toward Special Project Development, where I moved past routine testing to work on the Qase feasibility study alongside my teammates.
